SPECIALTY EXPERTISE

Since it began in 1995, McClaren, Wilson & Lawrie, Inc. has been committed solely to the design of civic and public safety related facilities. MWL's founding principals have worked together for nearly 30 years. The team's portfolio consists of more than 250 public safety facilities and 125 forensic science laboratory and medical examiner facilities in 43 states, and three Canadian provinces.

NATIONAL BREADTH WITH LOCAL DEPTH

MWL's projects address a full-range of government clients at city, county, state, and federal levels throughout North America. Among them are federal clients such as the FBI and the Department of State and state facilities such as Alaska, California, Hawaii, Maryland, New York, Texas, Virginia, and Washington. Also included are several of North America's largest city law enforcement organizations such as San Francisco, Seattle, Salt Lake City, Dallas, Niagara, Washington DC, and Los Angeles. A sampling of recent county clients includes Allegheny, Saint Louis, Monroe, Montgomery, Los Angeles counties; as well as numerous small town and village law enforcement organizations.

SUCCESS FACTORS

The cornerstone to MWL's success has been a conscientious attention to ever-changing technological advances and evolving operational models. Although our staff has many years of experience we consistently research emerging law enforcement, fire, and forensic technology, management policy, and techniques. In addition, while always being cognizant of the many special requirements imposed by accreditation agencies and to the transforming federal regulatory requirements regarding health and safety.

A good reputation is gained over time and we are proud that our clients have endorsed our commitment to excellent service and outstanding public safety buildings. Through our pursuit of practical, durable and timeless architecture, we have shown that there is no inconsistency between functional design and perennial legacy architecture.

**Accommodating the constraints of today,
while encouraging a vision of tomorrow.**
